

**MINIMAL HISTORY
OF ANKLE INJURIES?**

TRY OUR

ULTRA 360[®] LACE-UP

**ULTRA
ANKLE[®]**

ANKLE BRACING. *EVOLVED.*[®]

The Ultra 360[®] locks your ankle in place while the figure-8 straps provide 360° of ankle support to help prevent excessive ankle rolling. The multi-adjustable design allows you to customize your level of support.

360° COMPLETE SUPPORT

The lace-up design of the Ultra 360[®] compresses the ankle to assist with swelling and pain while the figure-8 straps help protect from inversion and eversion ankle sprains.

VERSATILE FIT

Customize the support of your brace through multiple adjustment points. This low-profile, form-fitting design will fit in any style athletic shoe, boot and will even work with sandals.

REUSABLE TAPE JOB

The figure-8 straps of the Ultra 360[®] were designed to replicate the way an athletic trainer professionally tapes an ankle for support and protection. This lace-up ankle brace is essentially a reusable tape job that you can apply yourself before every practice or game.

PRODUCT
INFORMATION

ANKLE SPRAINS ARE THE MOST COMMON SPORTS INJURY IN THE UNITED STATES.

45% of volleyball players will injure their ankles during the season.

After spraining an ankle, you are 70% more likely to re-sprain your ankle. With each sprain, ankle ligaments stretch causing the joint to become unstable.

LIMITLESS

SUPPORT

The **Hinged Cuff Design** helps to restrict excessive ankle twisting and turning, which causes **LOW and HIGH** ankle sprains, while still maintaining natural ankle range of motion.

PERFORMANCE

The **ONLY** ankle brace built for performance. The **Hinged Cuff Design** moves with your ankle's natural range of motion, allowing you to play better and play more, losing less time to ankle injuries.

COMFORT

The Performathane® soft shell uses your body heat to **FORM** a **CUSTOM-FIT** to the shape of your ankle. The custom fit makes your brace fit like a glove. It stays on your ankle, not on your mind.

DURABILITY

A full **ONE YEAR** warranty.

RECOMENDED SHOES

We recommend a **low or mid-top sneaker** with traditional tongue and laces where you can spread out the laces enough to insert your foot and Ultra Zoom® into the shoe. Sneakers with a sleeve or collar design (no tongue) limit the shoe's opening making it very difficult to insert any ankle brace into the shoe.

LOOSEN YOUR SHOE LACES!

When you fit the Ultra Zoom® ankle brace for the first time make sure to loosen your shoe laces significantly so your foot and the brace will easily fit into the shoe.
